

HYBRIFORCE 2400

PANAM

SEMENCES

Alfalfa Hybrid

DORMANCY 4

STRENGTHS

- Hybrid with constant yield
- The highest yield in silage among other hybrid varieties
 - Thin stems
 - Quick regrowth

IDENTITY

Alfalfa Hybrid (*Medicago Sativa L.*)

HYBRID CHARACTERISTICS

RESISTANCES AND TOLERANCES

Verticillium : VR

Nématodes : R

Anthraxnose (R1) : VR

Aphanomyces euteiches : VR

MR : Medium Resistant

R : Resistant

VR : Very Resistant

Fusarioses : VR

Bactérioses : VR

Phytophtora : VR

. Stem thickness

. Winter survival

. Force summer

. Regrowth

. Seedling vigour

. Dryness resistance

: Very thin

: Excellent

: Excellent

: Very strong

: Excellent

: Excellent

Features	Advantages
Out yields competitor varieties 94,3% of the time	Consistent performance.
Highly productive in dry and wet production years	Dependable supply of forage.
Rapid recovery after the harvest	Better use of growing season.
Fine stems	Attractive forage bales / Better packing in bunker silos / Less wasted forage in bunks.
Very dense, persistent stands	Better weed control in established stands.
Plant uniformity	Maintain consistent forage quality.
The yield of an hybrid	Generates more forage yield on the 3rd and 4th years.
Resistance to bad conditions	The harvesting period is longer. Maintain of forage quality.
Excellent disease resistance	Broad adaptability.

MANAGEMENT TIPS

- . Sowing density : From 15 to 20 Kg/ha if only alfalfa ; from 12 to 15 Kg mixed
- . Ability to reduce the sowing density of 20% compared to the normal practices
